WANTED

Electronics **SUMMER STUDENTS** for exciting placements in a fast-moving wireless **ELECTRONICS** company

CommAgility is a fast growing company working at the sharp end of wireless product design, using the latest DSP, FPGA and RF technologies to develop products for next generation wireless telecoms standards such as LTE and LTE Advanced.

We are based at Holywell Park, on the Loughborough University Campus. From here we sell to and support customers around the world, including India, China, Europe and North America.

Currently we are looking for one or two students for a 3 month placement in summer 2012.

You should be due to graduate in 2013 and expecting a 1st or 2:1 in electronics. A focus on embedded software design is preferred, although FPGA and digital hardware design is also of interest to us.

You'll be working in a small team and able to contribute to the development of real products, with great opportunities to learn and to get experience across the whole product development cycle. A successful placement also means that you will be favoured in our graduate recruitment process for 2013.

To apply, please email your CV to jobs@commagility.com
